

AAVE LONG SETUP

MON · SEP 14, 2026 · 9:05 AM EST

▲ LONG

MULTI-TIMEFRAME MOMENTUM

STOCH RSI

Lower-to-higher timeframe momentum is trying to line up. That earns a spot on the watchlist — but momentum is not a trigger. Price confirmation comes first. The 1H has to open above all moving averages and hold.

THE LEVELS

MA CLUSTER — THE AGGRESSIVE ENTRY

A 1H candle opens above every moving average — Simple and Smooth — and then holds it. The open is not the signal. The hold is the signal. Opens above and immediately loses them? The setup didn't trigger and you didn't miss anything.

MA CLUSTER RECLAIM

STOP: BELOW 1H MAs + SAFETY NET

CONFIRMATION: LOWEST

\$131 SUPPLY — THE CLEANER ENTRY ★

Price breaks the next resistance, comes back to retest it, and proves it can hold as support. That's resistance flipping to support in real time — the thing that turns a guess into a plan. Around a weekly open, this is the entry worth waiting for.

BREAK → RETEST → HOLD

STOP: BELOW THE FLIPPED LEVEL

CONFIRMATION: HIGHEST

FLAG TRENDLINE — THE CONTINUATION ENTRY

Next resistance breaks and successfully retests. Do NOT chase if price runs straight through it. No retest, no entry. A level that never gets tested never proved anything — chasing a vertical candle is how a good setup becomes a bad trade.

BREAK → RETEST (NO CHASE)

STOP: BELOW THE TRENDLINE ONCE FLIPPED

CONFIRMATION: MEDIUM

THE LADDER

LEVELS · PRICE · WHY

●	TP3 Final target (her line: \$159.35). Runner only.	\$159.00 TARGET
●	TP2 Second scale-out. Her purple line sits at \$140.74 — big supply above it.	\$140.00 TARGET
●	FLAG TRENDLINE The descending flag trendline. Break + retest only. Sits ABOVE TP1.	\$137.50 LEVEL
●	TP1 First scale-out, 70–75% into targets. Lands just under the trendline.	\$135.78 TARGET
●	\$131 SUPPLY ZONE Supply zone \$130–132.50 on every timeframe. Break → retest → hold.	\$131.00 LEVEL
●	MA CLUSTER 1H Simple & Smooth MAs ~\$126.50–127.50. Price is testing them now.	\$127.00 LEVEL
●	NOW Live price at capture — time stamped above. Everything above this line is earned, not assumed.	\$125.90 LIVE
●	SUPPORT/ SAFETY NET 1H demand box \$124.50–125.50. Swing low \$124.00.	\$125.00 LEVEL
●	STOP Below the 1H MAs + the safety net. Size the position to this.	\$123.50 INVALIDATION

Levels are structure, not instructions. Price reaching a level is information. Whether it becomes an entry is your decision and your risk. Not financial advice.

EXECUTION RULES

SCALE OUT

Take 70–75% into TP1–TP3. Resistance sits before the big targets — protect profit on the way up.

DON'T CHASE

Straight through a level with no retest? The entry is gone. Let it go. There's always another setup.

MISSED IT?

Be patient. Wait for the next break/retest or a pullback into support. The next entry has to be earned.

SIZE TO THE STOP

Set the stop where structure says, then size to fit it. Leverage adjusts to the stop — never the reverse.

JOURNAL IT

Log which level you acted on, why, and whether you followed the plan. A clean loss is still a successful execution.

YOUR OWN RACE

Don't compare trades or position sizes. Someone else's entry isn't yours. DYOR.

WEEKLY OPEN WARNING

This setup was called into the weekly close/open. Liquidity gets funky there and the first breakout can absolutely fake us out. You may want to wait for the \$131 retest — let it break resistance, come back, prove it can hold, then take the cleaner entry.

CONFIDENCE CHECK

▲ CONFIDENCE UP

Confidence rises if the 1H opens and holds over all moving averages AND resistance starts flipping to support.

▼ CONFIDENCE DOWN

Confidence drops if price opens above the MAs but immediately loses them. That's a failed reclaim — stand down. And know the other side of this chart: the 4H bull-flag measured target is \$113.83 if the structure breaks down. That number is why the stop exists.
